To whom it may concerns

In the framework of the creation of **mim**, a museum which will exhibit a private collection of minerals in Beirut, we worked with the company Vitringen GmbH und Glasbau Reier.

The 61 display cases that will display the minerals were produced by the firm in accordance with the required specifications and in an ongoing dialogue between the architects of the museum and Vitringen GmbH und Glasbau Reier.

These showcases combine the visual beauty with the requirements for the preservation of the collection (security, quality of glass, sealing). The mounting operation of the showcases was conducted in a very professional manner by Reier teams in an atmosphere of total cooperation with the teams working on the site of the museum. The tracking service is also of a very high quality.

Therefore, we recommend the company Vitringen GmbH und Glasbau Reier
